1. Introduction

VerifyDoc is a secure platform that lets you store your credentials — certificates, diplomas, and other qualifications — in one place, and share them with employers on your terms.

This guide is for **citizens**: students, graduates, and anyone holding a credential issued through VerifyDoc.

By the end of this guide, you'll be able to:

- Create and log in to your VerifyDoc account
- View and understand the credentials in your wallet
- Share a specific credential with an approved employer, with full control over what they see and for how long
- Track the status of anything you've shared

> ***Note:*** *You don't create credentials yourself — they're issued to you by an approved institution (such as your university or bootcamp). This guide covers what you do once a credential is already in your wallet.*

2. Getting Started

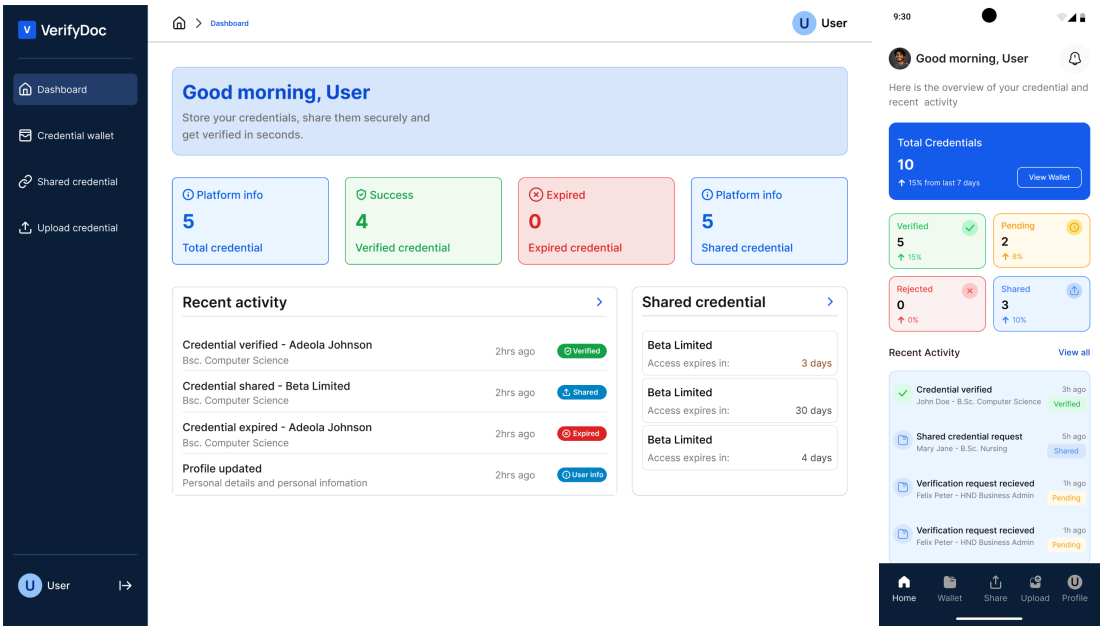

To get started on VerifyDoc, you'd need to create an account by following these steps:

1. Go to the VerifyDoc citizen sign-up page.
2. Enter your required registration details.
3. Submit the form. If any required field is missing or invalid, you'll see an error message telling you what to fix.
4. Log in and access your account once registration is complete.

2.1 Logging In

1. Go to the VerifyDoc login page.
2. Enter your registered email and password.
3. Select **Log In**.

You'll be taken to your dashboard once your credentials are verified.

2.3 Understanding Your Dashboard

Your dashboard is the starting point for everything in VerifyDoc. From here, you can:

- Open your **Credential Wallet** to view credentials issued to you
- See a summary of any credentials you've shared and their current status

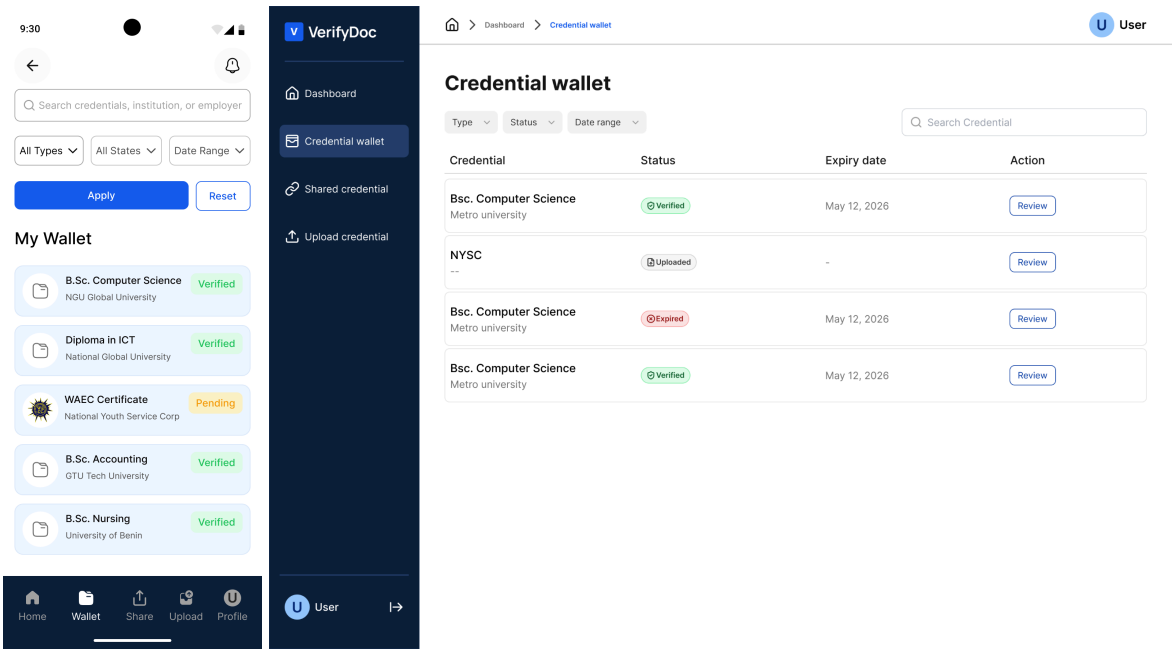

- Access your account settings

3. Your Credential Wallet

Your wallet holds every credential that's been issued to you. This section covers how to view them and understand what you're looking at.

3.1 Viewing Your Wallet

Select **Credential Wallet** on your dashboard to see a list of all the credentials issued to you

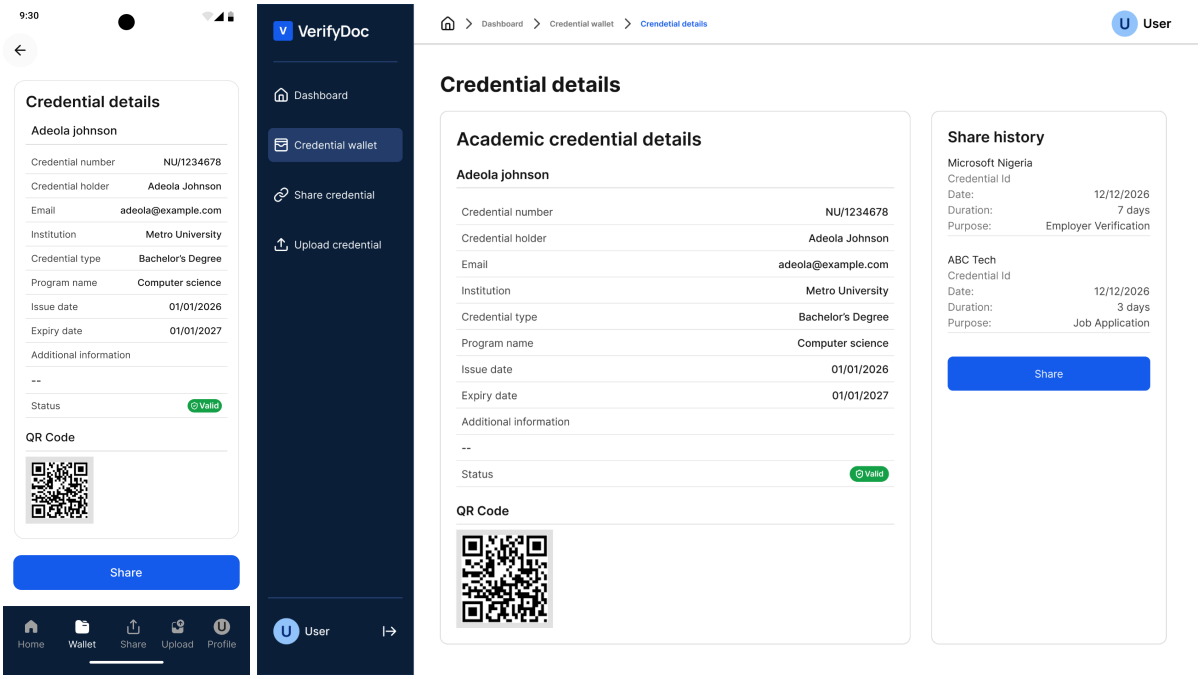

3.2 Understanding a Credential's Details and Status

Select any credential in your wallet to view its full details, including who issued it, when, and what it covers.

Each credential also shows a status:

Status	What it means
Verified	Confirmed as authentic and currently active
Pending	Awaiting confirmation from the issuing institution

Revoked	Withdrawn by the issuing institution and no longer valid
Expired	No longer within its valid period

3.3 How Credentials Get Into Your Wallet

Credentials are issued directly to you by an approved institution (such as your university or online bootcamp), you don't upload or create them yourself. Once issued, they appear in your wallet automatically.

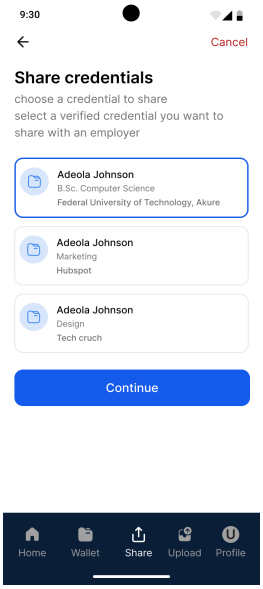

> For details on how institutions issue credentials, see the Institutions Onboarding Guide.

4. Sharing a Credential

This is where you control who sees your credentials. VerifyDoc never shares automatically so nothing leaves your wallet without your confirmation.

4.1 Selecting the Credential You Want to Share

1. Select the credential you want to share from your **Credential Wallet**.
2. Review its details to confirm it's the right one.
3. Select **Share**.

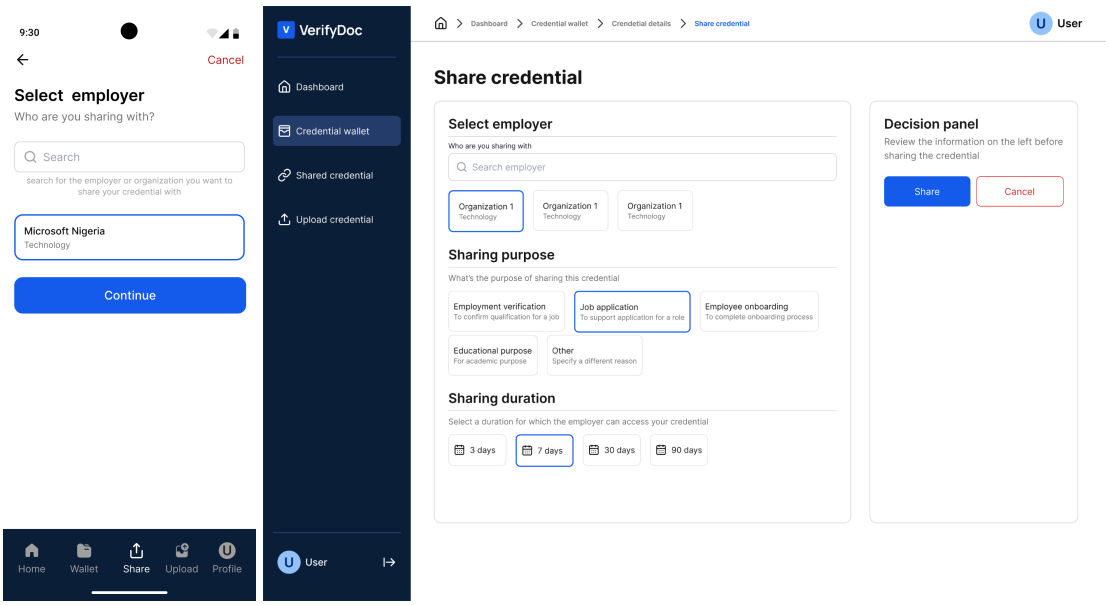

4.2 Choosing an Approved Employer

On your dashboard, you'll see a directory of **approved employers** — organizations that have registered on VerifyDoc and been approved by the Platform Admin.

1. Search or browse to find the employer you want to share with.
2. Select the employer from the list.

   If the employer you're looking for isn't listed, they haven't registered or been approved yet. You can ask them to register on VerifyDoc before you can share a credential with them.

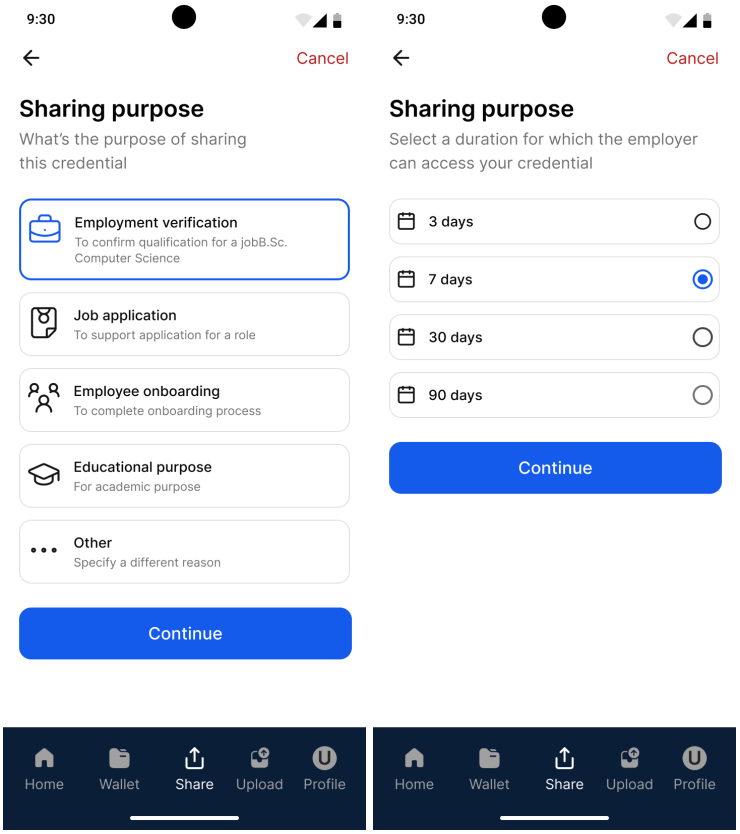

4.3 Setting Purpose and Expiry

1. Enter a **purpose** for this share (for example, "Job application — [Role name]").

2. Confirm or adjust the **expiry period**. By default, access expires after **7 days**.
3. Select **Continue**.

   Setting an expiry means the employer's access to this credential automatically ends after the period you choose — you don't have to manually revoke it.

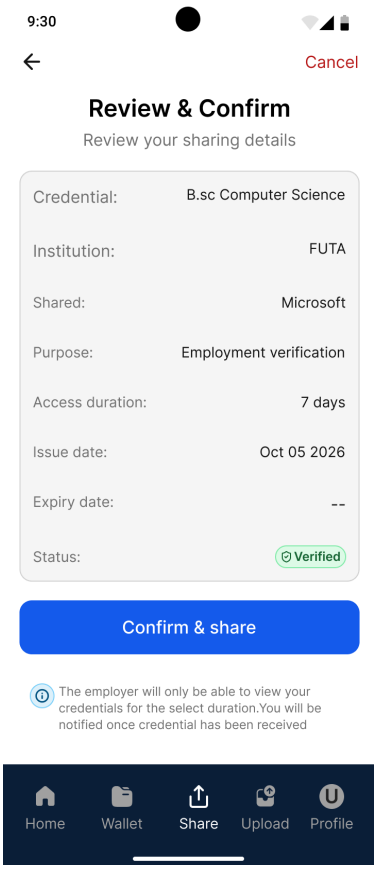

4.4 Reviewing and Confirming the Share

Before anything is shared, you'll see a confirmation screen showing exactly what you're about to grant access to.

1. Review the credential, the employer you've selected, the purpose, and the expiry period.
2. Select **Confirm Share** only if everything is correct.

Once confirmed, the employer can access this specific credential, for the purpose and time period you set — nothing else.

4.5 What the Employer Can and Can't See

It's worth understanding exactly what sharing a credential does, and does not give access to:

What the employer can see:

- The one credential you selected
- Its status (Verified, Pending, Revoked, Expired)
- The issuing institution and credential details

What the employer cannot do:

- See any other credential in your wallet
- Search for you or browse other citizens on VerifyDoc
- Access your credential after the expiry period you set

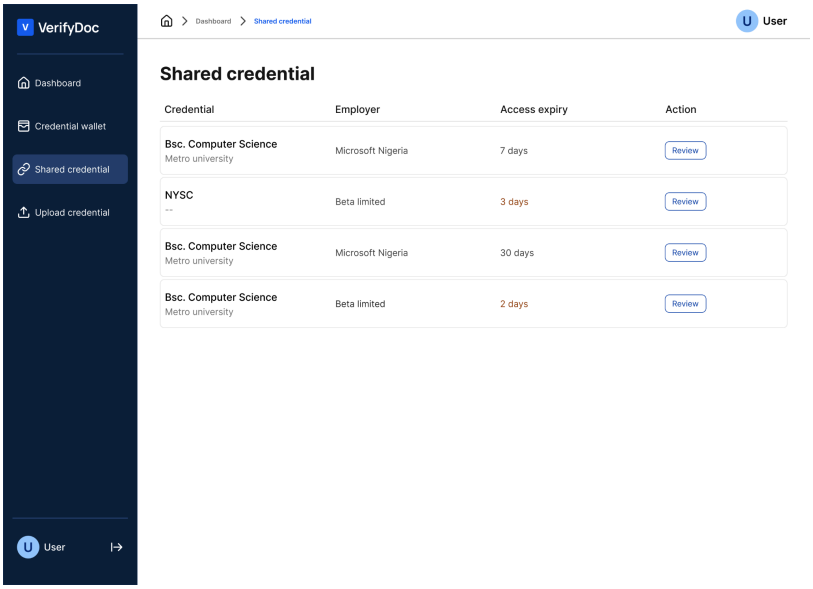

A QR Code or Credential Number alone doesn't expose your credential information. The employer must be logged in, belong to an approved organization, and have been granted access by you before anything is shown.

5. Tracking Your Shares

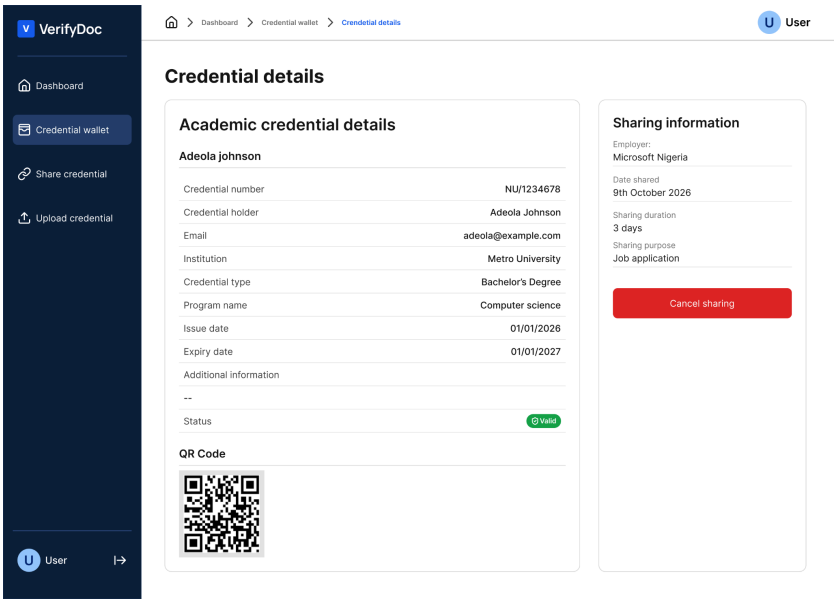

You can follow up on what credentials you've shared and with whom you've shared them.

5.1 Viewing Sharing Status

1. Go to your sharing activity on your dashboard (where you can see every credential you've shared).

Each entry shows the employer, the purpose, and the current status of that share.

5.2 What Happens When an Employer Requests Fresh Confirmation

An approved employer can ask the issuing institution to reconfirm a credential you've shared with them — for example, if they want an up-to-date check before finalizing a hiring decision.

- This request goes directly to the issuing institution — you don't need to do anything.
- The institution responds by confirming, rejecting, or marking the credential for manual review.
- The updated result is sent to the employer.

6. Troubleshooting & Common Questions

Running into an issue? Most common questions are answered in the VerifyDoc FAQ, covering things like why a credential might show as "Pending," what "Requires Manual Review" means, and what to do if an employer isn't listed yet.

7. Getting Help

If you can't find what you need in this guide or the FAQ, contact VerifyDoc support:
