1. Introduction

VerifyDoc is a digital credential verification platform designed for the Nigerian market. It enables participating institutions to issue secure digital credentials, citizens to store and selectively share them, and approved organizations to verify their authenticity and current

status using QR codes and unique Credential Numbers — with verification based on the original credential record, not the QR code alone.

1.1 Purpose

VerifyDoc has a Privacy Policy because the platform handles sensitive personal, educational, and employment-related information. This policy explains how VerifyDoc protects that information and ensures that access to credentials is controlled — especially important since VerifyDoc allows citizens to choose which credentials they share, with whom, and for how long.

1.3 Policy Scope

This policy applies to everyone who uses VerifyDoc or whose information is processed through it, covering information collected at account creation, credential submission or verification, general platform use, and website visits.

2. Who This Policy Applies To

- **Individuals:** job seekers, graduates, applicants, or employees verifying or sharing credentials
- **Employers and organizations:** using VerifyDoc to verify applicant or employee credentials
- **Educational institutions:** issuing, managing, or verifying academic credentials
- **Professional institutions:** issuing or verifying professional qualifications or memberships
- **Other authorized users:** anyone else with permission to use VerifyDoc for legitimate verification purposes

3. Information We Collect

3.1 Personal Information

Name, email address, phone numbers.

3.2 Credential Information

Certificates, degrees, diplomas, transcripts, credential identifiers, verification records.

3.3 Technical Information

IP address, device information, browser information, log information.

3.4 Information Provided by Institutions

Institution name, accreditation details.

4. How We Use Your Information

VerifyDoc processes information to create and manage accounts, issue and manage credentials, verify credential authenticity and status, enable citizen-controlled sharing, detect fraud, maintain platform security, and communicate with users about verification activity.

5. How We Share Information

Credential information is shared only when a citizen actively chooses to share a specific credential with an approved employer, after confirming the credential, recipient, purpose, and access period. Approved employers can only access what's been explicitly shared with them — they cannot search for or browse citizens or access other credentials.

5.1 Platform Administrators

Administrators manage the platform and oversee how information is accessed and handled — approving or rejecting organizations and institutions, managing records, and monitoring credential and verification activity. The administrator role is created at platform setup and isn't available for self-registration.

5.2 Third-Party Service Providers

VerifyDoc may use authorized third-party providers to support platform operation, security, or maintenance. These providers may only process information as needed for their specific service and are subject to VerifyDoc's access and security requirements.

> *The backend team uses Brevo for email services, MongoDB for database management.*

5.3 User Consent

VerifyDoc requires citizen confirmation before any credential is shared. The citizen selects the credential, the approved employer, the purpose, and the expiry period before confirming. Nothing is shared without this step.

6. Credential Verification and Data Access

Approved employers can verify a credential only after a citizen shares it with them, and only while logged in as part of an approved organization. Employers scan the QR code or enter the Credential Number to view the shared credential's details and status — nothing beyond that specific credential is accessible.

7. Data Security

Access is restricted to authorized users: employers and institutions must be approved before accessing protected features, and citizens control which credentials they share and with whom. VerifyDoc treats security and access control as critical given the sensitivity of the information it handles.

8. Data Retention

The credential is retained in the database until revoked by the user or institution who issued it

9. Your Privacy Rights

As a Nigerian platform, VerifyDoc's handling of personal data is guided by the principles of the Nigeria Data Protection Regulation (NDPR). Depending on applicable law, you may have the right to:

- Access the information VerifyDoc holds about you
- Correct inaccurate information
- Request deletion of your information
- Restrict or object to certain processing
- Withdraw consent where applicable
- Lodge a complaint with the relevant data protection authority

10. Cookies and Tracking Technologies

Session management is mainly used for login.
