# 1. Introduction

VerifyDoc lets your organization securely view credentials that citizens have chosen to share with you, and request an up-to-date confirmation whenever you need one.

This guide is for **employers**: companies, recruiters, HR teams, and recruitment agencies verifying a candidate's qualifications.

By the end of this guide, you'll be able to:

- Register your organization and get approved
- View credentials shared with you by citizens
- Request fresh confirmation of a credential from the issuing institution

> **Note:** You can only view credentials a citizen has actively chosen to share with your organization. VerifyDoc doesn't let employers search or browse citizen records.

# 2. Getting Started

Before you can view shared credentials, your organization needs to register and get approved.

## 2.1 Registering Your Organization

Start by creating your organization's account on VerifyDoc.

1. Go to the VerifyDoc employer sign-up page.
2. Enter your organization's registration details.
3. Submit the form.

## 2.2 Submitting Your Organization Details for Review

Your registration alone doesn't grant access — the Platform Admin reviews your organization's details before approving you.

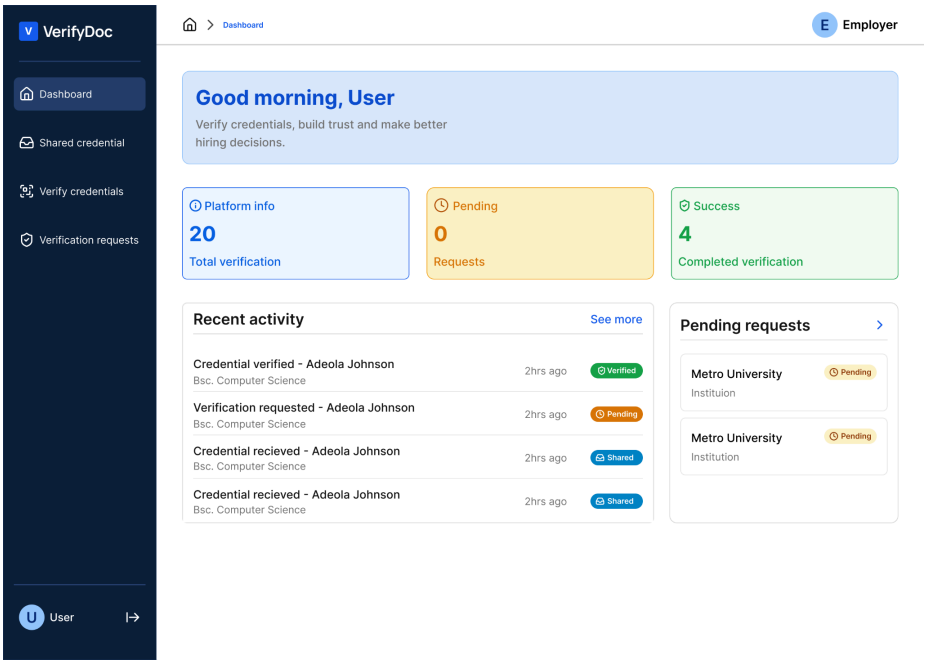

1. Complete your organization profile with the information requested.
2. Submit your details for Platform Admin review.

## 2.3 Checking Your Approval Status

Track your application from your dashboard until it's approved.

1. Log in to your organization account.
2. Check your approval status from your dashboard.

Once approved, you'll gain access to view credentials shared with your organization.

V VerifyDoc

# Application approved

Status: Pending

Your application has been approved. You can now access VerifyDoc and use the features available to your organization.

Application sumbitted: 29 September 2026
Institution: Metro University

# 3. Viewing Shared Credentials

Once a citizen shares a credential with your organization, it becomes visible to you here.

## 3.1 Accessing Credentials Shared With Your Organization

Find every credential a citizen has shared with you in one place.

1. Log in to your organization account.
2. Go to **Shared Credentials** on your dashboard.
3. Review the list of credentials shared with you.

## 3.2 Viewing a Credential's Details and Status

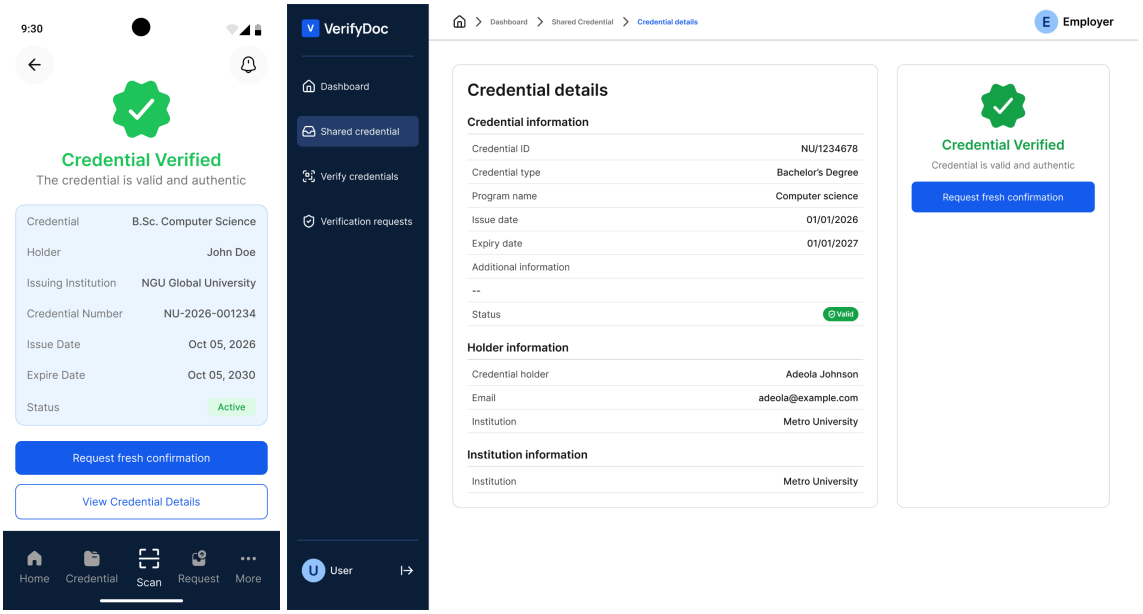

Open a credential to see what it covers and its current standing.

1. Select a credential from the list.
2. Review its details, including the issuing institution and current status.

Each credential shows one of these statuses:

| Status | What it means |
|---|---|
| **Verified** | Confirmed as authentic and currently active |
| **Pending** | Awaiting confirmation from the issuing institution |
| **Revoked** | Withdrawn by the issuing institution and no longer valid |

| | |
|---|---|
| **Expired** | No longer within its valid period |

*You can only see what the citizen has shared — the specific credential, its purpose, and its expiry. You can't view any other credential in their wallet.*

# 4. Requesting Fresh Confirmation

If you need an up-to-date check on a credential — for example, before finalizing a hiring decision — you can ask the issuing institution to reconfirm it.

## 4.1 When to Request Fresh Confirmation

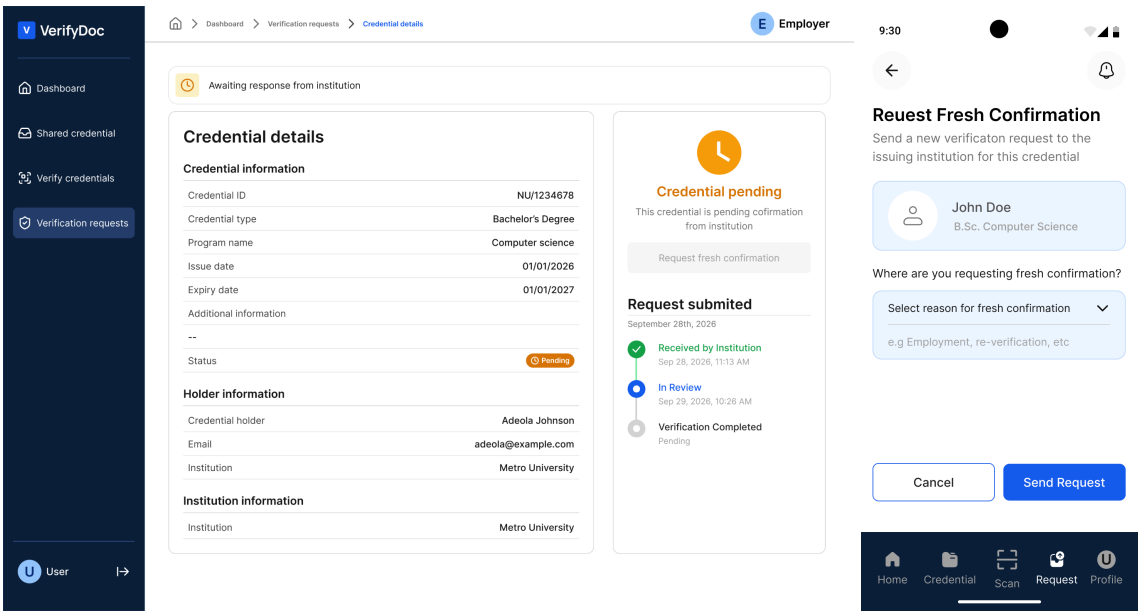

Consider requesting fresh confirmation if:

- Time has passed since the credential was first shared with you
- You want a final check before making a hiring decision
- The credential's status needs reconfirming for your own records

## 4.2 Submitting the Request

Send your request directly from the credential's detail view.

1. Open the credential you want reconfirmed.
2. Select **Request Fresh Confirmation**.
3. Confirm the request.

### 4.3 What Happens After You Request It

Your request goes directly to the issuing institution. They review it and respond by confirming the credential, rejecting it, or marking it for manual review. You'll see the updated result once they respond.

## 5. Troubleshooting & Common Questions

Most common questions are answered in the VerifyDoc FAQ — including what each verification status means, how to interpret a confirmation result, and what to do if a credential isn't showing up as expected.

## 6. Getting Help

If you can't find what you need in this guide or the FAQ, contact VerifyDoc support.
