1. Introduction

VerifyDoc lets your institution issue secure digital credentials to citizens and respond to verification requests from employers — all without paper certificates or manual confirmation calls.

This guide is for **institutions**: universities, polytechnics, bootcamps, and training providers who want to issue credentials through VerifyDoc.

By the end of this guide, you'll be able to:

- Register your institution and get approved
- Issue a digital credential to a citizen
- Review and respond to verification requests from employers

> ***Note:*** *Only approved institutions can issue credentials or respond to verification requests. Approval is granted by the VerifyDoc Platform Admin after reviewing your submitted details.*

2. Getting Started

Before you can issue credentials or respond to verification requests, your institution needs to register and get approved.

2.1 Registering Your Institution

Start by creating your institution's account on VerifyDoc.

1. Go to the VerifyDoc institution sign-up page.
2. Enter your institution's registration details.
3. Submit the form.

2.2 Submitting Your Institution Details for Review

Your registration alone doesn't grant access — the Platform Admin reviews your institution's details before approving you.

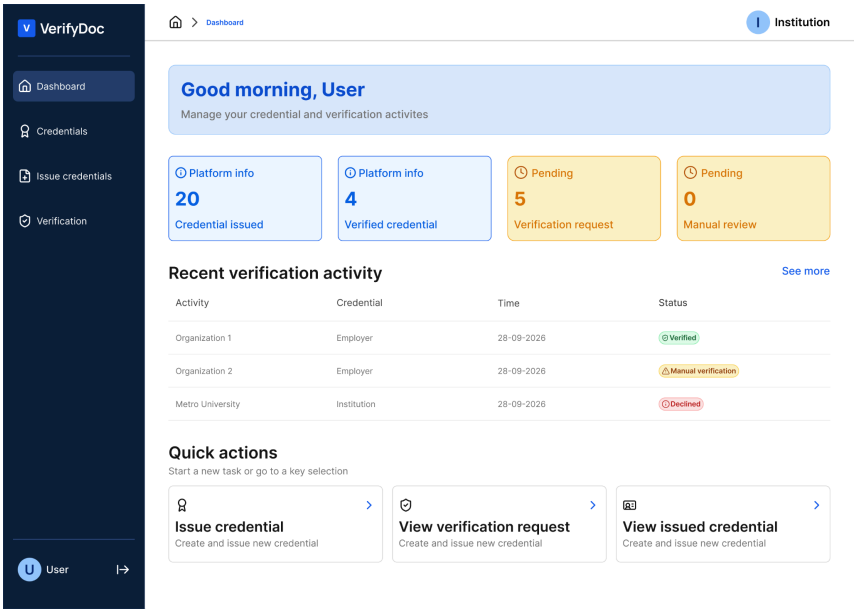

1. Complete your institution profile with the information requested.
2. Submit your details for Platform Admin review.

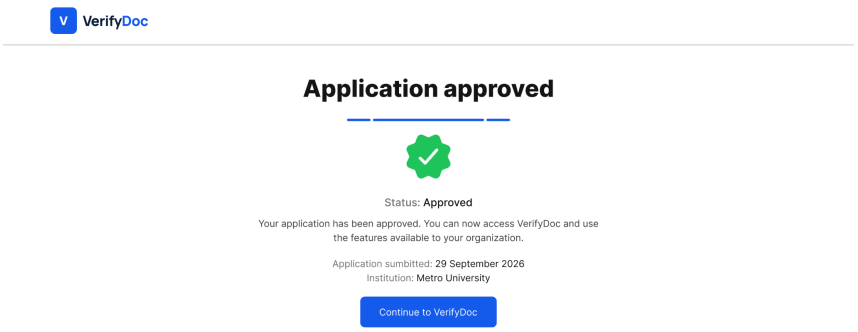

2.3 Checking Your Approval Status

Track your application from your dashboard until it's approved.

1. Log in to your institution account.
2. Check your approval status from your dashboard.

Once approved, you'll gain access to credential issuance and verification request features.

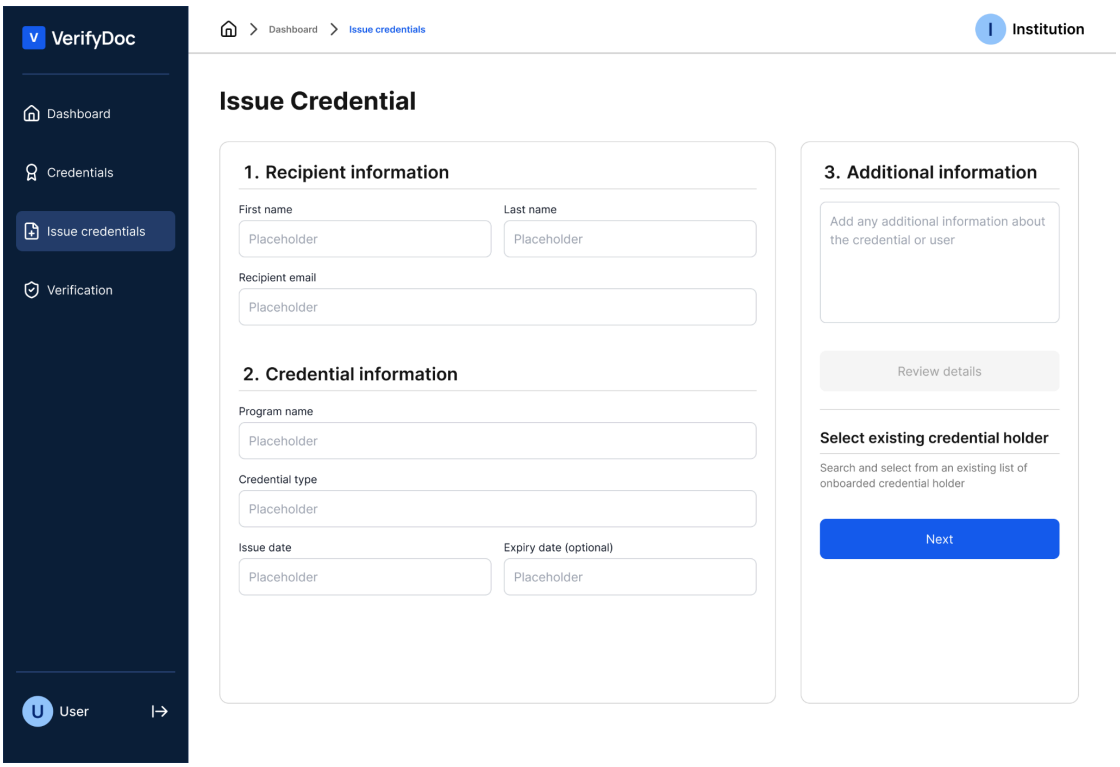

3. Issuing a Credential

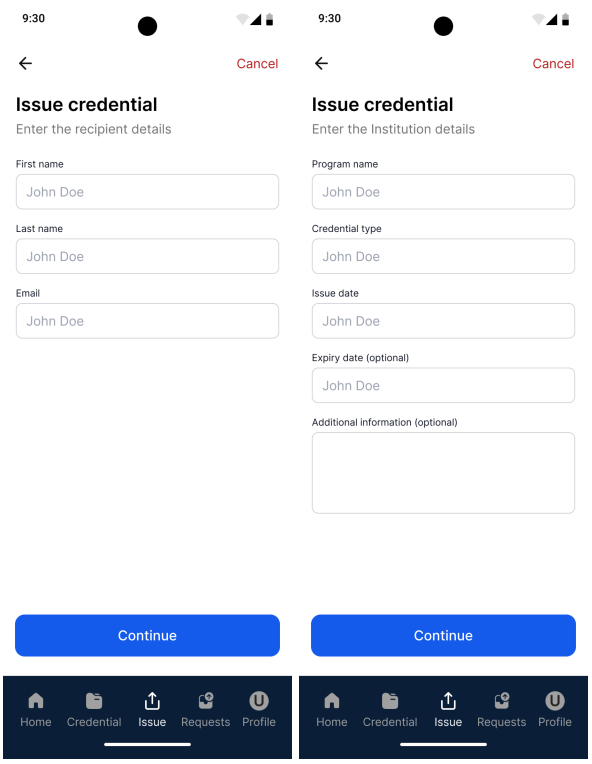

Once approved, you can issue digital credentials directly to citizens. This section walks through the full issuance process.

3.1 Starting a New Credential Issuance

Begin the issuance process from your institution dashboard.

1. Go to your institution dashboard.
2. Select **Issue Credential**.

3.2 Entering Credential Details

Enter the details of the credential you're issuing:

1. Enter the citizen's identifying information.
2. Enter the credential details (qualification name, date, and relevant specifics).
3. Review the entered information for accuracy.

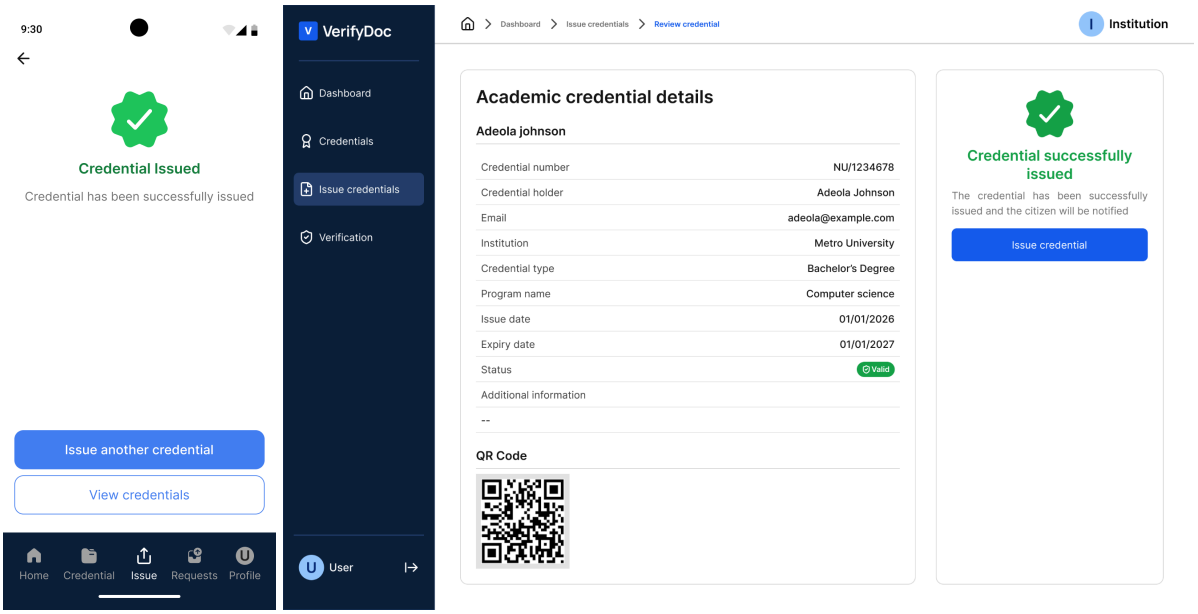

> *Double-check these details before proceeding — incorrect information on an issued credential affects the citizen's wallet and any future verification requests.*

3.3 Issuing the Credential to a Citizen

Finalize and generate the credential once you've confirmed the details are correct.

1. Select **Issue** to finalize the credential.

   VerifyDoc generates a unique Credential Number and QR Code for this credential.

3.4 What the Citizen Sees After Issuance

The credential appears automatically in the citizen's wallet with a **Verified** status. The citizen can then view its details and share it with approved employers at their discretion.

> *For how citizens manage and share issued credentials, see the Citizen User Guide.*

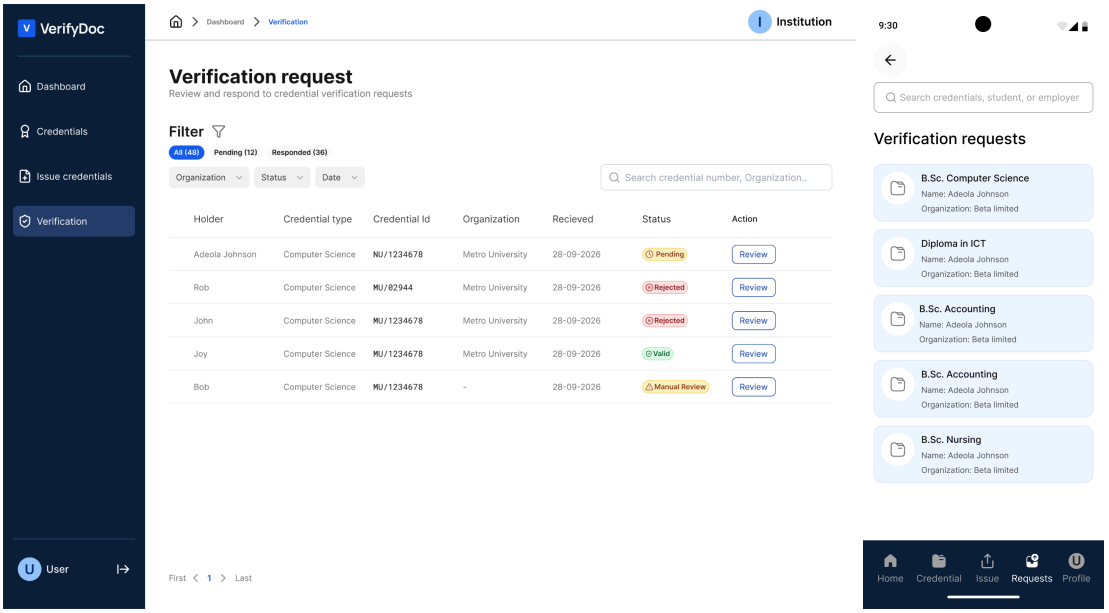

4. Responding to Verification Requests

Employers can ask you to reconfirm a credential they've received from a citizen. This section covers how to review and respond to those requests.

4.1 Viewing Incoming Verification Requests

Check your dashboard for any pending requests from employers.

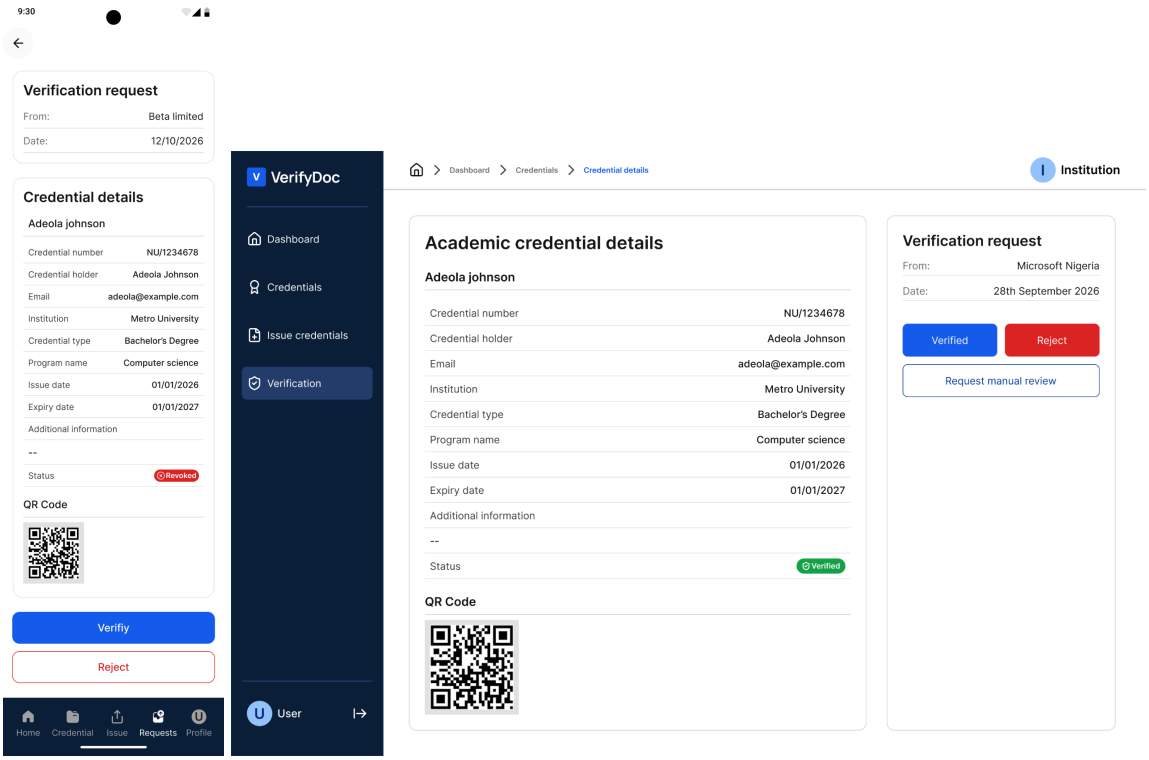

1. Go to your institution dashboard.
2. Select **Verification Requests**.
3. Review the list of pending requests.

4.2 Reviewing a Request

Open a request to see the credential and the employer asking about it.

1. Select a request from the list.
2. Review the credential details and the employer requesting confirmation.

4.3 Confirming, Rejecting, or Marking for Manual Review

Choose the outcome that reflects your findings.

1. Select **Confirm** if the credential is valid and accurate.
2. Select **Reject** if the credential is invalid or doesn't match your records.
3. Select **Mark for Manual Review** if you need more time or information before deciding.

4.4 What Happens After You Respond

Your response is sent directly to the requesting employer as an updated verification result. The citizen's credential status is unaffected unless you've revoked it.

5. Troubleshooting & Common Questions

Most common questions are answered in the VerifyDoc FAQ, including what each verification status means, how long verification takes, and what to do if a credential issuance doesn't go through.

6. Getting Help

If you can't find what you need in this guide or the FAQ, contact VerifyDoc support.
